

Title: Technical Report on Computer System Crash During Online Examination

Student Name: Essa Manzoor

ID: 20692

Instructor: Numan Gulzar

Department: BS(CS)7th

Date: 9th January 2026

Introduction:

This report outlines a technical problem that occurred during an online examination where the computer system crashed unexpectedly. The report details the incident, methodology used to identify the issue, corrective actions taken, and recommendations to prevent similar occurrences in the future.

Brief Background of the Incident

During a scheduled online examination for 50 students, the central computer system responsible for monitoring and recording responses suddenly crashed. The system operated on Windows 10 with a stable internet connection, and the exam platform was [Name of platform]. The crash resulted in temporary loss of access to the exam portal, affecting multiple students.

Problem Description

The computer system displayed a blue screen of death (BSOD) during the exam, causing the examination software to stop functioning. Attempts to restart the application were unsuccessful, and several students reported lost progress. Initial checks ruled out user error and suggested a system-level fault.

Methodology Used for Solving the Issue

The IT team followed a systematic approach to identify the cause: 1. Collected error logs from the system. 2. Checked network connectivity and server status. 3. Verified hardware components for malfunction (RAM, hard disk, etc.). 4. Conducted compatibility checks for the exam software with the operating system. 5. Consulted system manuals and knowledge bases for similar incidents.

Solution / Action Taken

1. Restarted the computer and performed a safe mode boot to prevent recurrence of immediate crash.
2. Updated the operating system and exam software to the latest version.
3. Replaced faulty RAM modules identified during diagnostics.
4. Conducted a full system test to ensure stability.
5. Rescheduled the online exam and informed all students of new instructions.

Recommendations

- Conduct routine maintenance and updates of all examination systems. - Implement automated backup of student responses during exams. - Train staff and students on emergency procedures. - Ensure redundancy in hardware to prevent a single point of failure. - Monitor system performance in real-time during exams.

Conclusion

The computer system crash during the online examination highlighted vulnerabilities in hardware and software management. Through systematic troubleshooting and corrective actions, the issue was resolved, and the exam was successfully completed. Implementing the recommended preventive measures will reduce the likelihood of similar incidents in the future, ensuring a smoother examination process.
